(54) Title: DEVICE FOR GENERATING ELECTRICAL SIGNAL CORRESPONDING TO CHANGE IN POSITION OR POSTURE

(57) Abstract: A device for generating an electrical signal corresponding to a change in posture comprising, a container which is formed of an electrical insulating material and is fixed to an electrode holder formed of an electrical insulating material and in which a fluid dielectric is sealed; a plurality of pairs of peripheral electrodes disposed at positions which are symmetrical about a central point of a cross section of the container at a predetermined interval with an inner peripheral surface of the container; and a pair of counter electrodes which are electrically insulated from each other and are respectively disposed at an upper surface of the electrode holder which serves as a bottom of the container and at a lower surface of a ceiling of the container at the central point of the cross section of the container; a voltage being applied to the pair of container electrodes.
